# STUDENT ENROLLMENT &COURSE MANAGEMENT SYSTEM(SECMS)

# 5. PROJECT DEVELOPMENT PHASE

## 5.1 Project flow

The Student Enrollment & Course Management System (SECMS) development was carried out through the following milestones

## 5.2 DEVELOPEMENT ACTIVITIES

1. Salesforce Developer Account Creation

2. Custom Object Creation – Student, Course, Enrollment, Instructor

3. Tabs Creation

4. Lightning App Creation

5. Fields Creation

6. Create Relationships

7. Page Layout Customization

8. Validation Rules

9. Flows (Automation)

10. Approval Process

11. Reports

12. Dashboards

13. Security Setup

14. Conclusion

**DEVELOPEMENT ACTIVITIES**

1. **Salesforce Developer Account Creation**

A Salesforce Developer Account was created to configure and deploy the Student Enrollment system.

2. **Custom Object Creation**

- Custom objects were created for:
- Student
- Course
- Enrollment
- Instructor
- These objects store and manage the academic information of the system.

3. **Fields and Relationships**

Required fields were created for student, course, instructor, and enrollment records. Lookup relationships were created between Enrollment and Student, Course, and Instructor.

4. **Page Layout and Record Types**

Page layouts and record types were configured to separate New Enrollment and Re-Enrollment processes and display the relevant information.

5. **Validation Rules**

Validation rules were implemented to ensure valid student email addresses and prevent an enrollment from being approved before fees are paid.

6. **Automation with Flows**

- Salesforce Flows were developed to:
- Automatically populate the enrollment date.
- Send an email when an enrollment is approved.

- Automatically assign an instructor based on course category.
- Create a follow-up task for requested enrollments.

7. **Approval Process**

An approval process was configured to route enrollment requests to the Training Manager. Approved requests are updated to Approved, while rejected requests are marked Rejected and a notification is sent to the student.

8. **Reports and Dashboards**

Reports were created for student status, enrollments by course, pending approvals, and revenue from paid fees. A Student Management Dashboard was created using charts, a gauge, and a table to visualize the data.

9. **Security Setup**

Profiles, Permission Sets, and Organization-Wide Defaults were configured to provide role-based access for Admins, Enrollment Officers, and Instructors.
