STUDENT ENROLLMENT & COURSE MANAGEMENT SYSTEM (SECMS)

8. PROJECT DEMONSTRATION

8.1 Demonstration Objective

- Demonstrate the completed Student Enrollment & Course Management System (SECMS)
- Show how the system manages student, course, instructor and enrollment information.
- Demonstrate automation, approval, reporting and dashboard features.
- Verify that the implemented system supports the academic enrollment

8.2 Demonstration Requirements

- Salesforce Developer Org

- Student, Course, Instructor and Enrollment objects
- Required fields and relationships
- Validation Rules
- Salesforce Flows
- Approval Process
- Reports and Dashboards
- Configured user profiles and permissions

8.3 Demonstration Steps

1. Open the Salesforce SECMS application.

2. Show the Student, Course, Instructor and Enrollment modules.

3. Create/view student and course records.

4. Create an enrollment record.

5. Demonstrate validation rules.

6. Submit the enrollment for approval.

7. Demonstrate instructor assignment and automation.

8. Show generated reports.

9. Display the Student Management Dashboard.

10. Demonstrate role-based security and access.

8.4 Expected Demonstration Result

1.Student & Course Management: Student records are created and stored securely with validation. Course records with fees, duration, and capacity are managed without duplication.

2. Enrollment Process: Enrollment record is created by linking Student and Course. Enrollment Date is auto-populated via Flow. System prevents invalid enrollments (past date, duplicate email, full capacity).

3. Approval & Automation: Enrollment submitted for approval goes to Admin queue Admin can Approve/Reject, and status updates automatically. Email notification is sent to student on Approval/Rejection. Instructor is auto-assigned based on course specialization. Follow-up Task is auto-created for admin after 2 days.

4. Reports & Dashboard: Reports show Total Enrollments, Pending Approvals, Course-wise Students, and Monthly Revenue correctly. Dashboard displays visual charts (Pie chart for Approval Status, Bar chart for Revenue, Donut for Courses).

5. Security & Access: Role-based access works - Admin has full access, Instructor has limited access. Validation rules and OWD protect data integrity.

8.5 Final Demonstration Checklist

- ✓ Student records

- ✓ Course records
- ✓ Instructor records
- ✓ Enrollment records
- ✓ Validation rules
- ✓ Approval process
- ✓ Automation flows
- ✓ Reports
- ✓ Dashboard
- ✓ Security configuration
- ✓ Testing screenshots

8.6 Demonstration Conclusion

The Student Enrollment & Course Management System demonstrates a centralized Salesforce solution for managing the student academic lifecycle. The system supports student registration, course creation, enrollment management, instructor assignment, approvals, revenue tracking and reporting. By using Salesforce validation rules, flows, approval processes and dashboards, the project improves data accuracy, operational efficiency and decision-making.
