Student Enrollment & Course Management System (SECMS)

1. BRAINSTORMING & IDEATION

1.1 Problem Identification

The operational challenges within the legacy academic environment were analyzed using the Customer Problem Statement Template. This methodology isolates the specific user goals, underlying obstacles, systemic root causes, and psychological impacts experienced by key institutional stakeholders.

1.2 Problem Statements

PS	(customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Enrollment officer	manage student enrollments efficiently	enrollment data is scattered	current systems are manual and unintegrated	frustrated and error-prone
PS-2	Administrator	track enrollments and revenue	reporting is delayed	data is not centralized	uncertain in decision-making

Problem Statement – PS-1: Enrollment Officer

I am: Enrollment Officer

I'm trying to: Manage student enrollments efficiently

But: Enrollment data is scattered

Because: Current systems are manual and unintegrated

Which makes me feel: Frustrated and error-prone

Problem Statement – PS-2: Administrator

I am: Administrator

I'm trying to: Track enrollments and revenue

But: Reporting is delayed

Because: Data is not centralized

1.3 Empathy Map Canvas

Empathy Map	**content**
Think & Feel	Concerned about duplicate bookings, incorrect enrollment data, and revenue loss
Hear	Complaints from students and management about delays and enrollment issues
See	Rechecks student data and follows up manually for approvals and enrollment updates
Say & Do	Multiple spreadsheets, emails, and scattered enrollment information
Pain	Duplicate entries, scattered data, manual work, and approval bottlenecks
Gain	Automation, centralized data, dashboards, faster enrollment processing, and easier tracking

1.5 Brainstorming and ideation

Step 1 – Brainstormed Ideas

To solve the identified enrollment and course management problems, the following ideas were considered:

1. Spreadsheet Automation

Automate student and enrollment data management using spreadsheets

2. Standalone Enrollment Portal

Develop a separate portal for managing student registrations and enrollments.

3. ERP Integration

Integrate enrollment management with an existing ERP system

4. Salesforce-Based Enrollment System

Develop a centralized Student Enrollment & Course Management System using Salesforce

Step 2 – Grouping of Ideas.

- The ideas were grouped into three categories
- Manual Solutions – Spreadsheet-based management
- Semi-Automated Solutions – Standalone enrollment portal
- Fully Automated Cloud Solutions – Salesforce-based SECMS and ERP integration

Step 3 – Idea Prioritization

After comparing the proposed solutions based on feasibility, automation, scalability, centralized data management, and overall impact, the Salesforce-based Student Enrollment & Course Management System (SECMS) was selected.

- The selected solution provides centralized student, course, enrollment, and instructor management along with automated workflows, approval processes, validation, reports, and dashboards.
- Final Selected Idea
- Student Enrollment & Course Management System (SECMS)
- A Salesforce-based centralized and automated system for managing students, courses, enrollments, instructors, approvals, and reports.
