STUDENT ENROLLMENT &COURSE MANAGEMENT SYSTEM(SECMS)

7. PROJECT DOCUMENTATION

1. Project Details

- Project Overview – Brief description of SECMS.
- Problem Statement – Identifies manual and scattered enrollment problems.
- Project Purpose – Centralizes student, course and enrollment data.

2. Requirements

- Functional Requirements – Student, course and enrollment management.
- Non-Functional Requirements – Security, usability, reliability and performance.
- Customer Journey – Registration → Course Selection → Enrollment → Payment → Approval → Instructor Assignment.

3. System Design

- Data Flow Diagram – Shows how data moves through the system.
- Solution Architecture – Salesforce objects, automation and security layers
- Technology Stack – Salesforce Lightning, Objects, Flows, Validation Rules, Reports and Dashboards.
- Relationships – Links Student, Course, Enrollment and Instructor objects.

4. Development Details

- Object Creation – Student, Course, Enrollment and Instructor.

- Fields & Page Layouts – Stores and displays required information.
- Validation & Approval – Validates data and manages enrollment approval.
- Automation – Flows for enrollment date, notifications, instructor assignment and follow-uptasks.

Reports & Dashboards – Tracks enrollments, students, approvals and revenue.

5. Testing

- Functional Testing – Tests student, course, instructor and enrollment records.
- Validation Testing – Checks validation rules and enrollment constraints.
- Automation Testing – Verifies flows and approval processes.
- Report Testing – Checks reports and dashboards.
- Screenshots – Captures evidence of testing results.

6. Final Documentation

- Advantages & Disadvantages – Records the benefits and limitations of the system.
- Conclusion – Summarizes the completed SECMS implementation.
- Future Scope – Payment gateway, self-service portal, analytics and mobile access.
- Appendix – Salesforce configuration, dataset and GitHub/Demo details.
- Overall: The documentation phase maintains a complete record of the requirements → design → development → testing → final results of SECMS.
