Student Enrollment & Course Management System (SECMS)

3. PROJECT DESIGN PHASE

3.1 Problem-Solution Fit

SECMS addresses the problems of manual and fragmented student enrollment processes by using Salesforce-based centralized data management, automation, approval workflows, dashboards, and security controls.

PROBLEMS

- Fragmented student and enrollment data
- Manual paperwork and data entry
- Delayed enrollment approvals
- Scattered systems and records

SOLUTIONS

- Unified dashboards
- Automated approval processes
- Centralized student and course database
- Automated enrollment workflows

3.2 Proposed Solution

Functional Requirements

Parameter	Description
Problem	Fragmented student and enrollment data
Solution	Salesforce-based SECMS
Novelty	End-to-end enrollment automation
Social Impact	Improved student and administrator experience
Revenue Model	Institutional deployment
Scalability	Multi-department and multi-course support

3.3 Solution Architecture

The SECMS architecture integrates Salesforce objects, automation flows, approval processes, dashboards, and security layers to provide a centralized student enrollment and course management solution

Architecture Components

Component	Description
1.Student Object	Stores and manages student information
2. Course Object	Stores course details and availability
3.Enrollment Object	Manages student enrollment requests and status
4. Instructor Object	Stores instructor details and assignments
5.Automation Flows	Automates enrollment and administrative processes
6.Approval Processes	Handles enrollment approval and rejection
7. Dashboards	Provides enrollment and performance insights
8.Security	Controls access to student, course, and enrollment data

3.4 Architecture Flow

Salesforce Platform

|

Student Object | Course Object | Enrollment Object | Instructor Object

|

Automation Flows | Approval Processes | Dashboards | Security

- **This architecture enables SECMS to centralize data, automate enrollment activities, manage approvals, provide real-time reporting, and maintain secure access to academic information.**
